DETAILED ACTION

Drawings

Figure 1 should be designated by a legend such as --Conventional-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Objections

Claims 3 and 4 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim should refer to other claims in the alternative only. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Nakahara et al US Pat. 5,485,130.

Nakahara et al disclose a FET switch, comprising a signal line, an FET 7a, an impedance transformation network (4a and 4b), wherein a gate of said FET 7a is connected with a voltage 6a for controlling the impedance between a drain and a source of said FET 7a, said drain and said source are series connected with said impedance transformation network (4a and 4b) and

then parallel connected or series connected with said signal line 5. The impedance network is a combination of transmission lines (4a and 4b). The impedance transformation network is design to make the off state capacitance of the FET becomes low impedance, while in the on state low impedance of FET becomes high impedance. (Figures 2 and 3 and column 4, line 25-53)

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Jacobs et al US Patent 3,662,294, Sjogren US Patent 6,054,907, Kashiwa US Patent 5,563,551 and Ou US Patent 3,965,445.
